

MEC 559 - Mobile Robotics and Autonomous Vehicles

Instructor: Nilanjan Chakraborty

Contact Information

Office: Heavy Engineering 212.

Email: nilanjan.chakraborty@stonybrook.edu

Course Description

This course will cover the fundamentals of planning, state estimation, and control techniques for mobile robots and autonomous vehicles. Key topics include: Kinematics of wheeled mobile robots; State estimation, Localization, and Mapping; Simultaneous Localization and Mapping Algorithms (SLAM) Algorithms; Path planning, Obstacle Avoidance, and Non-holonomic Control; Mobile robot programming and control architecture.

Expected Student Background

Students are not expected to have any background in robotics although having a background will be helpful. Students are expected to have undergraduate level knowledge of linear algebra and probability theory. Students should be comfortable programming in either MATLAB or Python or C or C++.

Books

- Roland Siegwart, Illah Reza Nourbakhsh, and Davide Scaramuzza, *Introduction to Autonomous Mobile Robots*, 2nd Edition, MIT Press, 2011.
- Alonzo Kelly, *Mobile Robotics: Mathematics, Models, and Methods*, Cambridge University Press, 2013.
- Sebastian Thrun, Wolfram Burgard, and Dieter Fox, *Probabilistic Robotics*, MIT Press, 2005.

Course Learning Objectives

1. Be able to construct kinematic motion models of mobile robots as well as sensing models for different sensor systems.
2. Use motion models as well as sensor models and sensor data in a Bayesian framework to solve localization and mapping problems.
3. Understand and implement sensor-based collision avoidance and path planning algorithms.
4. Be able to understand and program trajectory tracking controllers.

Assignments, Exams, and Projects

- **Homeworks:** There will be 6 homeworks. You will have about 1 – 2 weeks to complete a homework. Homeworks will be due in class. The homeworks will include Matlab coding. You are allowed to discuss with your colleagues but you have to submit your individual work. Any discussion or help that you have taken from your colleagues or other sources should be acknowledged. In other words, you should write the name of the persons you have worked with and also state explicitly the kind of help you have received.
- **Paper Critique:** There will also be one paper review report that you have to submit. You have to select one paper from a list of papers that I will provide (or you can choose your own paper based on your final project) and you have to write a critical review of the paper. You will get one week for the paper review.
- **Lecture Scribing:** You will also have to serve as a scribe for one lecture note. This will be done in groups of two. Latex support files will be provided for scribing.
- **Midterm Exam:** There will be one take home midterm exam. The exam will be open book, open notes. You will have 3 days or 72 hours to complete your exam. You are not allowed to consult with your colleagues for the exam.
- **Final Project and Presentation:** There will be one final project that will be done in groups of 2 to 3 students. You have to do two presentations and two reports for the final project. The first presentation and report will be a project proposal where you will describe the problem you want to solve and what are your plans for solving the problem. The final report and presentation will be a comprehensive description of your work. The reports are to be written using Latex. I will provide the supporting style files.

Grading Breakdown and Policy

Your overall grade will be based on your performance in all the class work mentioned above. The weight distribution on grades for the different components are given below.

- 5 Homeworks (25%).
- 1 Take Home Midterm Exam (30%).
- 1 Paper Critique (10%).
- Scribing 1 Lecture (5%).
- Final Project and Project Presentation (30%).

The GRADING SCALE will be an accumulation of your course work, as follows (there will probably be no curves): A (100-90), A- (89-85), B+ (84-80), B (79-75), B- (74-70), C+ (69-65), C (60-64), F (59 or below).

Late Assignment Policy: Assignments are due in class unless otherwise stated or you have made prior arrangements with me. You are allowed at most two late days for each homework or paper critique. If you submit your homework late you will be penalized 20% of the points. Assignments will not be accepted after the late days expire. No late submission is allowed for the mid-term exam or the final project report.

Collaboration Policy: You are allowed and encouraged to collaborate with your fellow students on home works. However, you are required to turn in your own work and you should not copy the work of another person. Any collaboration or help should always be acknowledged explicitly. **No collaboration is allowed** on the take home midterm exam.

Lecture Schedule (Tentative)

1. Introduction to mobile robotics - Hardware and Software architectures.
2. Kinematic models of wheeled mobile robots.
3. Review of Probability Theory and Linear Algebra.
4. Sensing Principles, Sensors, and formulating Sensor Fusion problem as Bayesian Estimation.
5. Kalman Filtering and Extensions.
6. Localization in a Known Map.
7. Simultaneous Localization and Mapping - Particle Filters.
8. Simultaneous Localization and Mapping - Pose Graph Techniques.
9. Path Planning in Mobile Robots.
10. Sensor-based Collision avoidance techniques - Lane Following/Switching.
11. Non-holonomic Control and Parallel Parking.
12. Designing Trajectory Tracking Controllers for Mobile Robots.

Blackboard

All homework assignments and solutions will be posted on the Blackboard course account. For problems logging in, go to the helpdesk in the Main Library SINC Site or the Union SINC Site, you can also call: 631-632-9602 or e-mail: helpme@ic.sunysb.edu I will use email and blackboard exclusively to communicate with you off class. It is your responsibility to make sure that your email id is a current one on the blackboard system. I suggest that you use a university email id for this class; it is free and official. I am not responsible for the emails not delivered to your commercially available email accounts.

Academic Honesty

Each student must pursue his or her academic goals honestly and be personally accountable for all submitted work. Representing another person's work as your own is always wrong. Faculty is required to report any suspected instances of academic dishonesty to the Academic Judiciary. For more comprehensive information on academic integrity, including categories of academic dishonesty please refer to the academic judiciary website at http://www.stonybrook.edu/commcms/academic_integrity/index.html Academic dishonesty is an extremely serious offense and will not be tolerated in any form. Academic dishonesty in general is the presentation of intellectual work that is not originally yours. Examples include, but are not limited to, copying or plagiarizing class assignments including homework, reports, designs, computer programs, graphics, and other submitted materials; copying or otherwise communicating answers on exams with other students; bringing unapproved aids, either in physical (written) or electronic form to an exam; obtaining copies of an exam prior to its administration, etc. Academic dishonesty violates both the ethical and moral standards of the Engineering profession and all infractions related to academic dishonesty will be prosecuted to the fullest via the CEAS CASA committee.

Americans with Disabilities Act

If you have a physical, psychological, medical or learning disability that may impact your course work, please contact Disability Support Services, ECC(Educational Communications Center) Building, Room 128, (631)632-6748. They will determine with you what accommodations, if any, are necessary and appropriate. All information and documentation is confidential, <http://studentaffairs.stonybrook.edu/dss/index.shtml>. Students who require assistance during emergency evacuation are encouraged to discuss their needs with their professors and Student Accessibility Support Center. For procedures and information go to the following website:<http://www.stonybrook.edu/ehs/fire/disabilities>.

Critical Incident Management

Stony Brook University expects students to respect the rights, privileges, and property of other people. Faculty are required to report to the Office of University Community Standards any disruptive behavior that interrupts their ability to teach, compromises the safety of the learning environment, or inhibits students' ability to learn. Faculty in the HSC Schools and the School of Medicine are required to follow their school-specific procedures. Further information about most academic matters can be found in the Undergraduate Bulletin, the Undergraduate Class Schedule, and the Faculty-Employee Handbook.
