

MEC 440-441 Mechanical Engineering Design I & II

(Fall 2018 and Spring 2019)

Document Date: August 20, 2018

Contact Information and Times For MEC 440 Fall 2018

Instructors:

Professor Jahangir Rastegar

Section 02

Fall Classroom: Earth & Space 131

Mon & Wed 8:30 AM– 9:50 AM

Office: 108 Heavy Engineering

Office Hours: MW 10:00 AM–12:00

Noon

631-632-8314

Jahangir.Rastegar@stonybrook.edu

Professor Jay Mendelson

Section 01

Fall Classroom: Melville Library

W4550

Mon & Wed 8:30AM – 9:50AM

Office: 171 Light Engineering

Office Hours: Mon & Wed 10:15AM

- noon

Jay.Mendelson@stonybrook.edu

Mr. Rafael Tejada

Office: 139 Light Engineering

rafael.tejada@stonybrook.edu

Machine shop contact:

Mr. Joseph Schurz

Office: B014 Old Engineering

631-632-8384

	MEC440	MEC441
Prerequisites:	MEC 300, 310, 317, 320, 325/125; MEC major; U4 standing	MEC440
Co-requisites:	MEC 410 and 411	

Textbook: No textbook is required.

Reference book: Stuart Pugh, *Total Design — Integrated Methods for Successful Product Design*, Addison Wesley, 1991.

Course sequence description

This two-semester capstone design project sequence provides senior mechanical engineering undergraduate students with significant senior design experience to practice knowledge, motivate learning, prepare for their careers, collaborate, develop innovative techniques and serve the community. Students will work in groups, designing and implementing their projects based on the total design methodology.

The design process consists of the following major steps:

- 1) Teaming and project selection
- 2) Market and user needs analysis
- 3) Product design specification (PDS) initialization and updating
- 4) Conceptual design
- 5) Detail design
- 6) Prototyping
- 7) Testing
- 8) Final prototype presentation
- 9) Final project documentation

The design process spans two semesters. The first semester will emphasize design and analysis. Students will go through the major design steps. By the end of the first semester, each team should generate a complete set of design details of the project, which is ready for fabrication. The second semester will emphasize implementation and testing. Students will fabricate and refine their prototypes, based on testing, to realize proposed functions.

To fulfill the course requirement, each design team needs to submit a project proposal after choosing the project, progress report for each of the above-listed design phases, and a final project report. Moreover, at the end of the first semester, each team needs to give an oral presentation of their design steps and results; and at the end of the second semester, each team needs to give an oral presentation of their design and implementation process, and demonstrate their prototype.

Course topics

1. MEC440
 - 1) Forming design teams
 - 2) Developing design proposals
 - 3) Project management

- 4) Market and user needs analysis
 - 5) Development of Product Design Specifications
 - 6) Conceptual design
 - 7) Preliminary detail design
 - 8) Writing technical reports
 - 9) Project presentations
2. MEC441
- 1) Detail design
 - 2) Design Review
 - 3) Prototyping
 - 4) Testing
 - 5) Writing technical reports
 - 6) Project presentations and demonstrations
 - 7) Create an e-Portfolio of the project on the Stony Brook web site, powered by Digication
 - 8) Display your project at the URECA campus-wide undergraduate research symposium held each April

Course learning objectives

1. MEC440
 - 1) Form a design team and identify a mechanical engineering problem with real-world constraints as a year-long design project.
 - 2) Present project research on how engineering solutions can have impact on the society and people's lives.
 - 3) Define and delineate individual professional responsibility for each team member.
 - 4) Learn contemporary issues related to the project through background search.
 - 5) Identify the desired needs and multiple realistic constraints.
 - 6) Generate and evaluate conceptual designs according to PDS.
 - 7) Conduct detail design and analysis incorporating engineering standards and manufacturing constraints.
 - 8) Acquire independently information and knowledge specific for the project.
 - 9) Prepare design reports and give effective oral presentations.

2. MEC441
 - 1) Conduct detail design and analysis incorporating engineering standards and manufacturing constraints.
 - 2) Identify and acquire new knowledge/information that are required for the project but not taught in classroom.
 - 3) Use modern engineering tools to implement the project.

- 4) Conduct experiments and analyze the data based on the requirements of the specific project.
- 5) Gain a better appreciation of how engineering solutions can have impact on the society and people's lives.
- 6) Prepare design reports and give oral presentations with visualized materials.
- 7) Develop an ability to function on multidisciplinary teams.

Team Rules

- 1) The design project should be a team work. *Each design team should consist of 3-4 people based on the need of the chosen project. No single-person team is allowed. Any team who wish to have a 5 members must obtain explicit approval from the instructors.*
- 2) *Each team must choose an advisor among the faculty, and maintain regular meetings with the advisor* based on a schedule discussed between the team and advisor.
- 3) *Each team must schedule meetings with the machinist in the detail design phase to deal with manufacturability issues.*

Grading

The letter grade will be issued at the end of the spring semester. The fall and spring semesters will have the same grade. Each team has 100 points. A(100-94), A-(93-90), B+(89-87), B(86-82), B-(81-79), C+(78-76), C(75-72), C-(71-68), D+(67-64), D(63-60), F(59 or below). The following is the breakdown:

1. Reports

MEC 440

- 1) Project Proposal
- 2) Progress report 1 (market/user needs analysis) 10%
- 3) Progress report 2 (conceptual design) 10%
- 4) Progress report 3 (updated market/user needs analysis + updated conceptual design + preliminary detail design) 15%
- 5) Fall Semester Presentation 5%

MEC 441

- 6) Progress report 4 (design review) 10%
- 7) Spring Final Report and Prototype 35%
- 8) Spring Semester Presentation 5%
- 9) Class attendance and team effort (class lectures, presentations and small group meetings) 10%

- In order to get a valid grade, *a working prototype must be finished* by the end of the spring semester. If the prototype is not finished, no grade will be given to the team. If your project is under external funding, you should be responsible to the project requirements.

- Each report will be submitted and graded on a team basis. ***Late submission of your report will cost 5% of that report per calendar day, and will not be accepted with a delay of 3 or more days.***
- The grade for each student will be adjusted on the basis of his/her team score according to his/her contribution to the project. Team members will have clear delineation of tasks as part of their documentation. Work that is not submitted by assigned deadlines will be reflected in a reduction of the team grade with additional reductions possible for work not completed by an individual team member who was responsible for that phase of the work. ***If any member misses 1/3 of project team activities as documented by their teammates, no grade will be given to him/her. If this happens in the first semester, he/she cannot continue on with MEC441.***
- The semester report and final report will be graded by both of the instructors and the project advisor. These grades will be used to calculate semester grades. It is your responsibility to make sure that you submit these reports to your instructors and your project advisor by the deadline.
- Your attendance of class presentations, small group sessions, and guest lectures is a part of your final grade. ***If you miss 1/3 or more of them, you will not be credited for class attendance.***
- Students are expected to clean up after themselves in the senior design lab and machine shop with regards to all parts and tools that they use and in terms of cleaning up waste material. They must also follow all lab and university policies with regards to avoiding the use of food and beverages in laboratories. Students must return all keys to the lab to the mechanical engineering department staff. Confer with Mr. Rafael Tejada for further explanation. Any student in violation of these policies may be subject to discipline ***including reductions in grades.***
- Your attendance and participation at the URECA campus-wide undergraduate research symposium held each April is mandatory. You are expected to help your group prepare a poster and take turns explaining your work to all visitors to your area. ***If you miss the URECA symposium, you will be penalized 3% points will be subtracted from your aggregate score for the class, which translates to roughly 1/3 of a letter grade.***

Project budget and reimbursement policy

- 1) ***The budget limit per student is \$280.***
- 2) The reimbursement of project related purchase covers only materials and components.
- 3) Sales tax cannot be reimbursed.
- 4) Detailed instructions and policy statements are shown in the document “Senior Design Reimbursement Packet 2018-19.pdf”, which will be loaded into Blackboard.

- 5) *There is additional funding that is available for assistive technology projects, through University and NSF grant funding for these projects.*

Americans with Disabilities Act

If you have a physical, psychological, medical or learning disability that may impact your course work, please contact Disability Support Services, ECC (Educational Communications Center) Building, room 128, (631) 632-6748. They will determine with you what accommodations are necessary and appropriate. All information and documentation is confidential. Students requiring emergency evacuation are encouraged to discuss their needs with their professors and Disability Support Services. For procedures and information, go to the following web site <http://www.ehs.sunysb.edu/fire/disabilities/asp>.

Statement on Academic Dishonesty

Academic dishonesty is an extremely serious offense and will not be tolerated in any form. Academic dishonesty in general is the presentation of intellectual work that is not originally yours. Examples include, *but are not limited to*, copying or plagiarizing class assignments including homework, reports, designs, and other submitted materials; copying or otherwise communicating answers on exams with other students; bringing unapproved aids, either in physical (written) or electronic form to an exam; obtaining copies of an exam prior to its administration, etc. Academic dishonesty violates both the ethical and moral standards of the Engineering profession and all infractions related to academic dishonesty will be prosecuted to the fullest via the CEAS CASA committee. For you, the honest student, academic dishonesty results in lower class curves, hence a depression in your GPA and class standing, while cheapening the degree you earn.

Critical Incident Management: Stony Brook University expects students to respect the rights, privileges, and property of other people. Faculty are required to report to the Office of University Community Standards any disruptive behavior that interrupts their ability to teach, compromises the safety of the learning environment, or inhibits students' ability to learn. Faculty in the HSC Schools and the School of Medicine are required to follow their school-specific procedures.
